

Hunde Tesfa

Addis Ababa, Ethiopia | hundetesfa6@gmail.com | github.com/hunde51 | linkedin.com/in/hunde51

SUMMARY

Fullstack engineer focused on backend systems, scalable APIs, and agentic AI workflows. Builds production-ready software designed to solve real business problems with reliability, performance, and clean architecture. Started coding in 2023, transitioned into frontend engineering in 2024, backend systems in 2025, and advanced agentic AI systems in 2026.

EDUCATION

Self-Taught Software Engineer, Started software development journey in 2023 with a focus on backend engineering, scalable systems, and agentic AI development.

PROJECTS

AuraTrade — Real-Time Paper Trading Platform | Stack: FastAPI, Next.js, Redis, PostgreSQL, Supabase, Celery

- Built a real-time paper trading platform with live market data streamed every 2 seconds using WebSockets and Redis pub/sub.
- Designed scalable backend services with FastAPI, async SQLAlchemy, JWT authentication, and PostgreSQL.
- Integrated an AI trading coach powered by Gemini/OpenAI for market insights and trading guidance.
- Implemented asynchronous task processing and event-driven architecture for performance and reliability.

Nexus AI Shop — AI-Powered E-Commerce Marketplace | Stack: FastAPI, React, TypeScript, PostgreSQL, Qdrant, LangChain, LangGraph, Chapa

- Developed a full-stack e-commerce marketplace tailored for Ethiopia with customer, seller, admin, and super admin roles.
- Built semantic product search using Gemini embeddings and Qdrant vector database for intelligent discovery.
- Created LangGraph-based AI agents for fraud detection, demand forecasting, and automated business insights.
- Engineered scalable backend APIs and modern frontend interfaces with strong type safety and maintainable architecture.

Relay AI Support — RAG-Based AI Support System | Stack: Python, FastAPI, LangGraph, LangChain, Gemini, Qdrant, SQLAlchemy

- Built a retrieval-augmented generation (RAG) support platform using hybrid retrieval with dense vectors and keyword search.
- Implemented human-in-the-loop approval workflows for sensitive or risky AI actions with complete audit logging.
- Orchestrated multi-agent workflows using LangGraph with structured output validation via Pydantic v2.
- Focused on reliability, observability, and production-grade AI system behavior.

TECHNICAL SKILLS

Backend: FastAPI, Python, Django, PostgreSQL, Redis, SQLAlchemy, Celery

Frontend: React, Next.js, TypeScript, Tailwind CSS

AI / ML: LangChain, LangGraph, RAG Systems, Qdrant, Google Gemini, OpenAI

Cloud / DevOps: AWS, Vercel, Neon, Supabase, FastAPI Cloud

Tools & Concepts: WebSockets, JWT Authentication, Async Architecture, Vector Search, Agent Orchestration, REST APIs
